Templates for G-Body/Metric 10 Bolt Rears

On later model 10 Bolt GM rears from G-Body and Metric cars, there are only two brake backing plate mounting holes on the housing end as shown below in Figure D. The end will need to be modified in addition to the instructions on the previous page. The two bottom holes will need to be enlarged and the two top holes will need drilled to fit the 3/8" bolts supplied. Cut and remove Figure C to use as a template for drilling the holes in your stock housing end.

******If printing this form be sure to set printer to print at actual size otherwise the pattern will be off!!***
